EDUCATION

University of Florida

May 2029

Bachelor of Science in Computer Engineering, Minor in Statistics

GPA: 3.82

Relevant Coursework: Data Structures & Algorithms, Engineering Statistics, Computational Linear Algebra, Calculus III

SKILLS

Languages: Python, C++, HTML, CSS, JavaScript, SQL

Developer Tools: Git, VS Code, PyCharm, GitHub Actions, Postman, Supabase, PostgreSQL, MATLAB

Libraries: Pandas, scikit-learn, NumPy, PyTorch, FastAPI, LangChain, OpenCV, MediaPipe

WORK EXPERIENCE

Chief Software Engineer – *BeachLens*

December 2025 – Present

- Created a search function for **30k+** users to find beaches, implementing typo forgiveness and semantic search, improving user retention by **30%** using TypeScript
- Engineered an agentic **CI/CD** pipeline for rules and amenities of **350+** beaches, saving onboarding time by **70%** using web scraping, LangChain, and Supabase
- Iterated on core features using test-driven development in an **Agile** environment, contributing to reaching **Top 100 Travel apps** globally in the App Store as a founding engineer
- Created a red tide bloom prediction model measured by a PR-AUC of **0.56** and ROC AUC of **0.96** on a held-out temporal test set using **XGBoost** trained on **~87,000** historical FWC cell-count samples in **scikit-learn**

Research Assistant – *UF Data Studio*

August 2025 – Present

- Built a text-conditioned music mood-editing pipeline that preserved harmonic content at **0.80** chroma cosine similarity while shifting the log-mel spectrum by 5 dB, utilizing a **21M**-parameter diffusion transformer
- Compressed 44.1 kHz spectrograms by **8x** into a diffusion-ready latent with by designing a convolutional autoencoder in PyTorch

PROJECTS

Subscriptos

March 2026

- Created an AI orchestrator to create quantifiable, explainable metrics for predatory legal contracts, reducing document review time by **90%** using Gemini Flash 2.5
- Integrated a data pipeline using FastAPI to parse and map Gemini's JSON outputs to Supabase, utilizing Postman for endpoint testing to maintain a consistent **20 ms** latency across user interactions

Nadia

February 2026

- Utilized Gaussian white noise, pitch shift, time shifts and time stretches on waveforms of respiratory stethoscope data to get **6000+** spectrograms for an EfficientNet model for lung disease identification with **80%** accuracy
- Leveraged Google Gemini API for feature identification on sample lung X-rays across **12+** respiratory diseases to create an interactive display using Figma Make

RepRight

October 2025

- Developed a fitness AI coach using **Random Forest Classification** to automatically identify exercises (pushups, squats) with **85%** accuracy and provide real-time form feedback using MediaPipe Pose and OpenCV
- Extracted **33** pose landmarks per frame to calculate joint angles and distances, automating quality assessment per rep performed

LEADERSHIP/INVOLVEMENT

Marcher – *Gator Marching Band*

July 2025 – December 2025

- Encouraged the football players and fans by performing during halftime and pregame to an **80,000+** person audience in a 24-member baritone section, dedicating **16 hours/week** for practice and performances
